***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

US 5068748 ("748") A teaches a first substrate [11]; a second substrate [12]; a liquid crystal layer sandwiched between first substrate and the second substrate [14]; a shielding material sealing the liquid crystal layer between the first substrate and the second substrate [13]; a plurality of scanning signal lines provided on the first substrate [18]; a plurality of video signal lines provided on the first substrate [19]; a plurality of counter signal lines provided on the first substrate [not shown but obvious as outlined below], the scanning signal lines, the video signal lines, and the counter signal lines defining pixel areas on the first substrate surrounded by the scanning signal lines, the video signal lines, and the counter signal lines, the pixel areas display area; collectively constituting a pixel electrode provided in each of the pixel areas; a counter electrode provided in each of the pixel areas, the counter electrode being spaced apart from the pixel electrode and being connected to one of the counter signal lines; a thin-film transistor provided in each of the pixel areas [16], the thin-film transistor being driven by a scanning signal from one of the scanning signal lines to supply a video signal from one of the video signal lines to the pixel electrode; a protection element line [31] provided around the display area, the protection element line being disposed between the display area and the shielding material [42]; and at least one diode connecting the protection element line to the video signal lines and the scanning signal lines [33].

Although the 748 lacks the in-plane switching arrangement, US patent 6191837 teaches such an arrangement for improving viewing angle. Accordingly, it would have been obvious to one of ordinary skill at the time the invention was made to combine 6191837 with 748.

The prior art of record fails to teach or suggest "at least one common line electrically connecting the counter signal lines together; and at least one diode connecting the protection element line to the at least one common line."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A. Dudek whose telephone number is 308-4782. The examiner can normally be reached on 9:00-5:30.
